- HTML/CSS
- JS
- PHP
- SQL

Skills

- Works autonomously
- Teamwork
- Quick learner
- Fast adaptability

Spoken languages

- French
- English: Fluent and Professional

Education

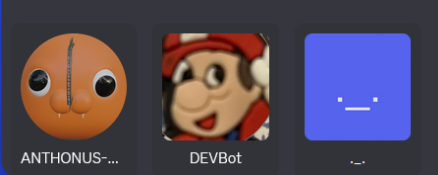

- 2024 → 2027: BUT Computer Science
- 2023: STI2D SIN Baccalaureate

Software Developer

Projects

Discord Bots

My Applications

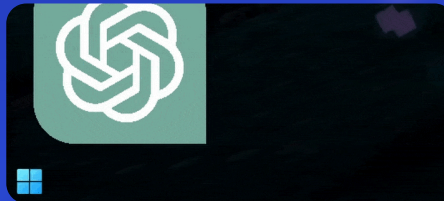

I developed two Discord bots in Java using JDA. ANTHONUS-bot, for private use, provides fun commands, an AI, YouTube downloading and music. Noob-Bot, for a Discord server, handles moderation, welcome messages and level systems. It stores its data using a SQLite database.

TextWorld

TextWorld is a page inspired by YourWorldOfText, available at textworld.anthonus.fr. It allows realtime writing on a large text map. Developed with HTML, CSS, JavaScript and Java, it uses WebSockets for communication and SQLite to store characters.

Custom Assistant

Custom Assistant is a desktop Java application offering a customizable voice assistant. It uses ChatGPT, provides a custom voice and personality, and performs web searches via the required APIs.

My Website

I also created a personal website, available at anthonus.fr, to showcase my projects and share information about me. The site is built with HTML, CSS and JavaScript. You can visit it to learn more about me and my work.

Professional Experience

- Development of a Discord bot for a private client to support the organization of a role-playing game. Project completed in two weeks. I developed this project independently using Java.
- Operator on a plastic injection press — temporary assignments: one month, then two periods of two weeks. This work required teamwork as well as autonomy, self-directed learning and taking initiative.
